Agenda

Overview

Business Objects

Business Services

Demo

Summary and Outlook

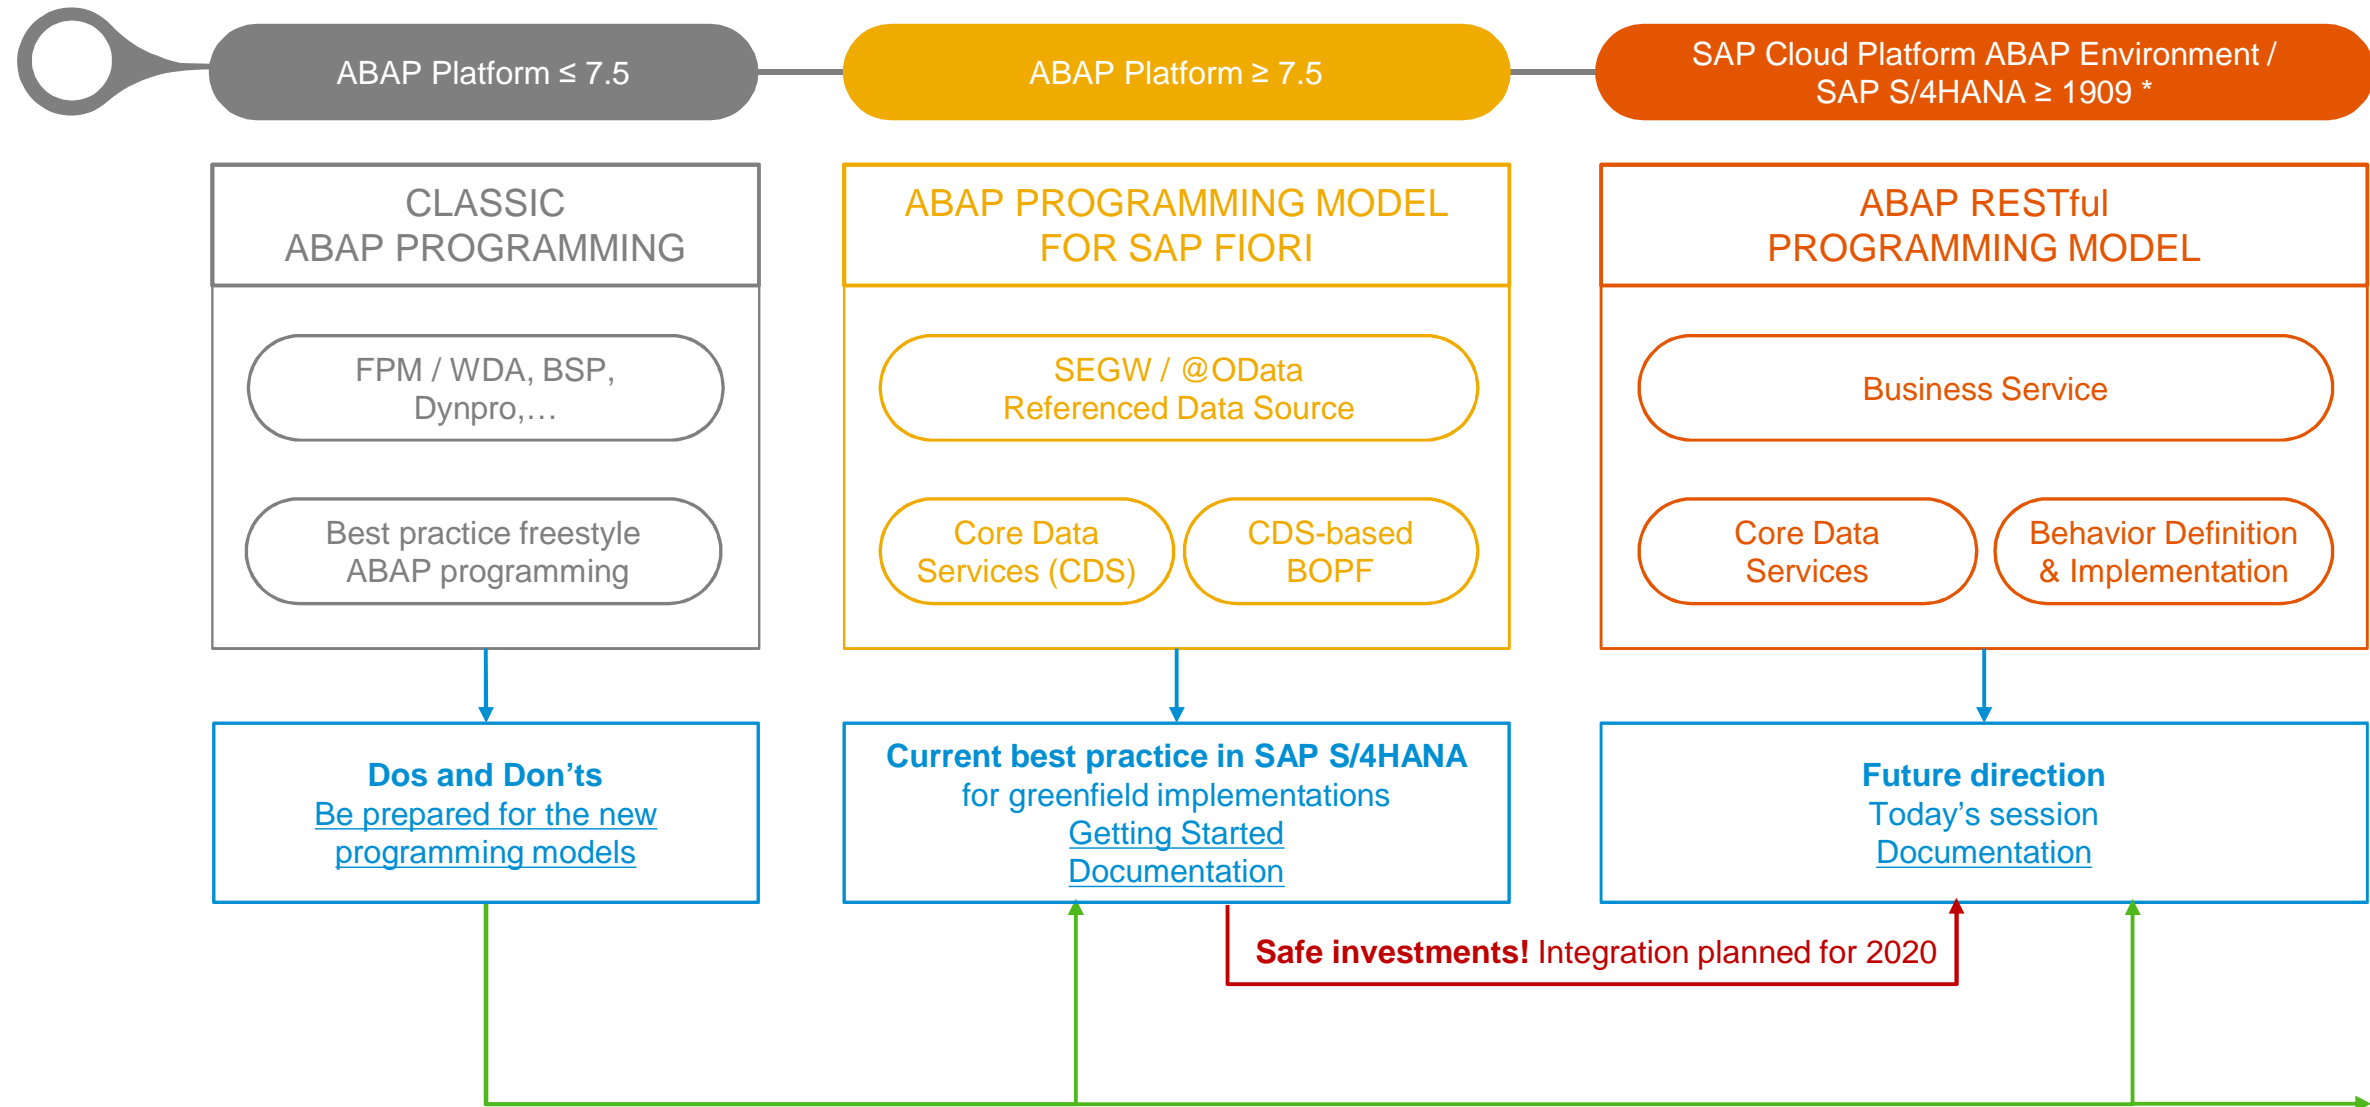

Overview

ABAP

Evolution of the ABAP programming model

* Reduced scope currently shipped on-premise: only brownfield implementations currently supported

ABAP RESTful Programming Model – The key players

ABAP Development Tools in Eclipse for all ABAP development tasks
Easy developer onboarding
End-to-end development flow in Eclipse-based editors

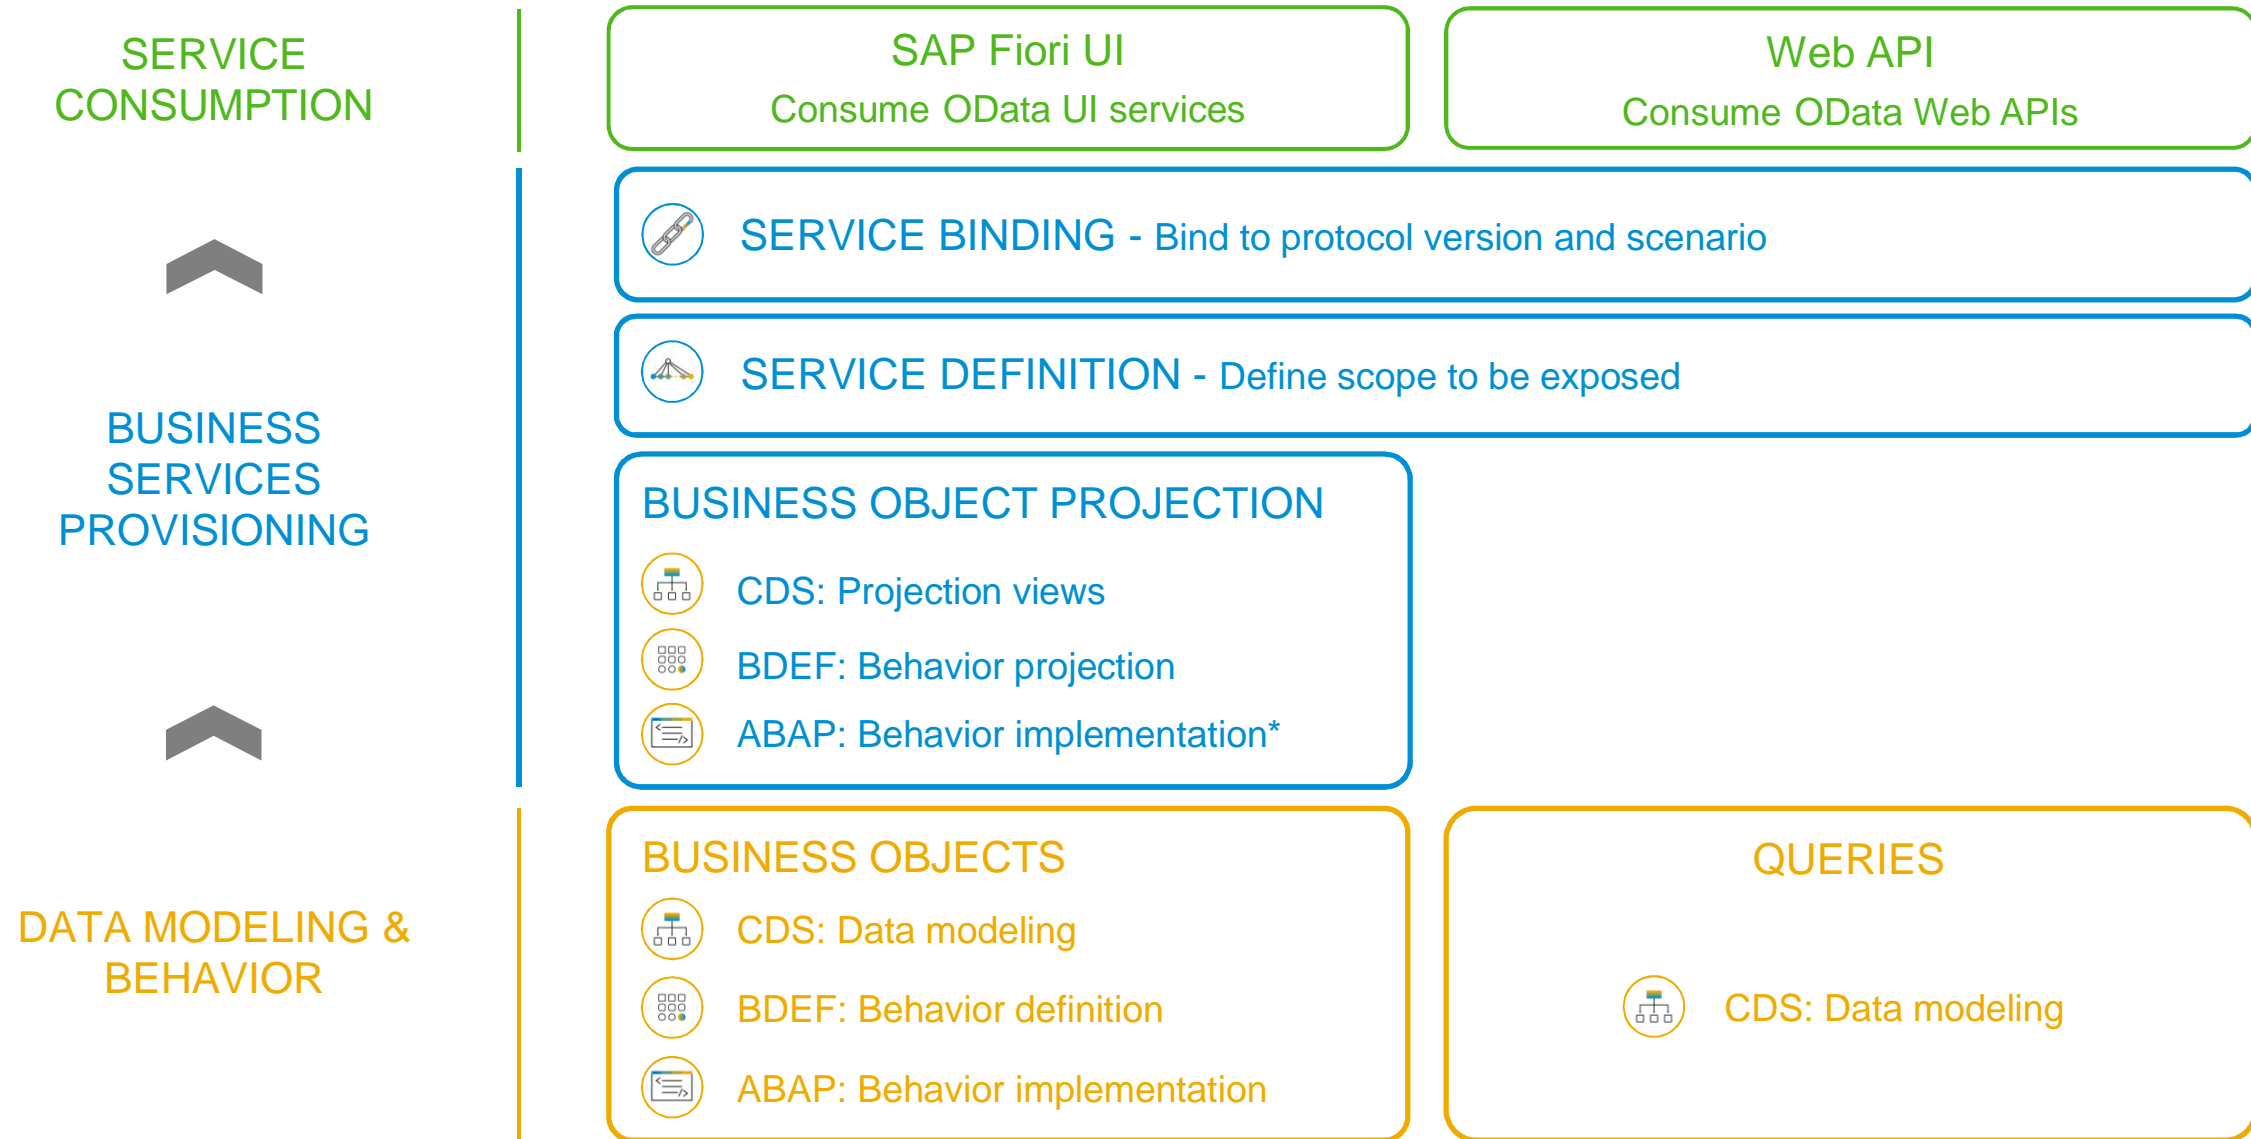

Languages: ABAP and CDS
Standard implementation tasks via typed APIs supporting static code checks,
auto-completion, element info

Frameworks
Take over technical implementation tasks
Focus on business logic added in code exits on protocol agnostic layers

ABAP RESTful Programming Model – The big picture

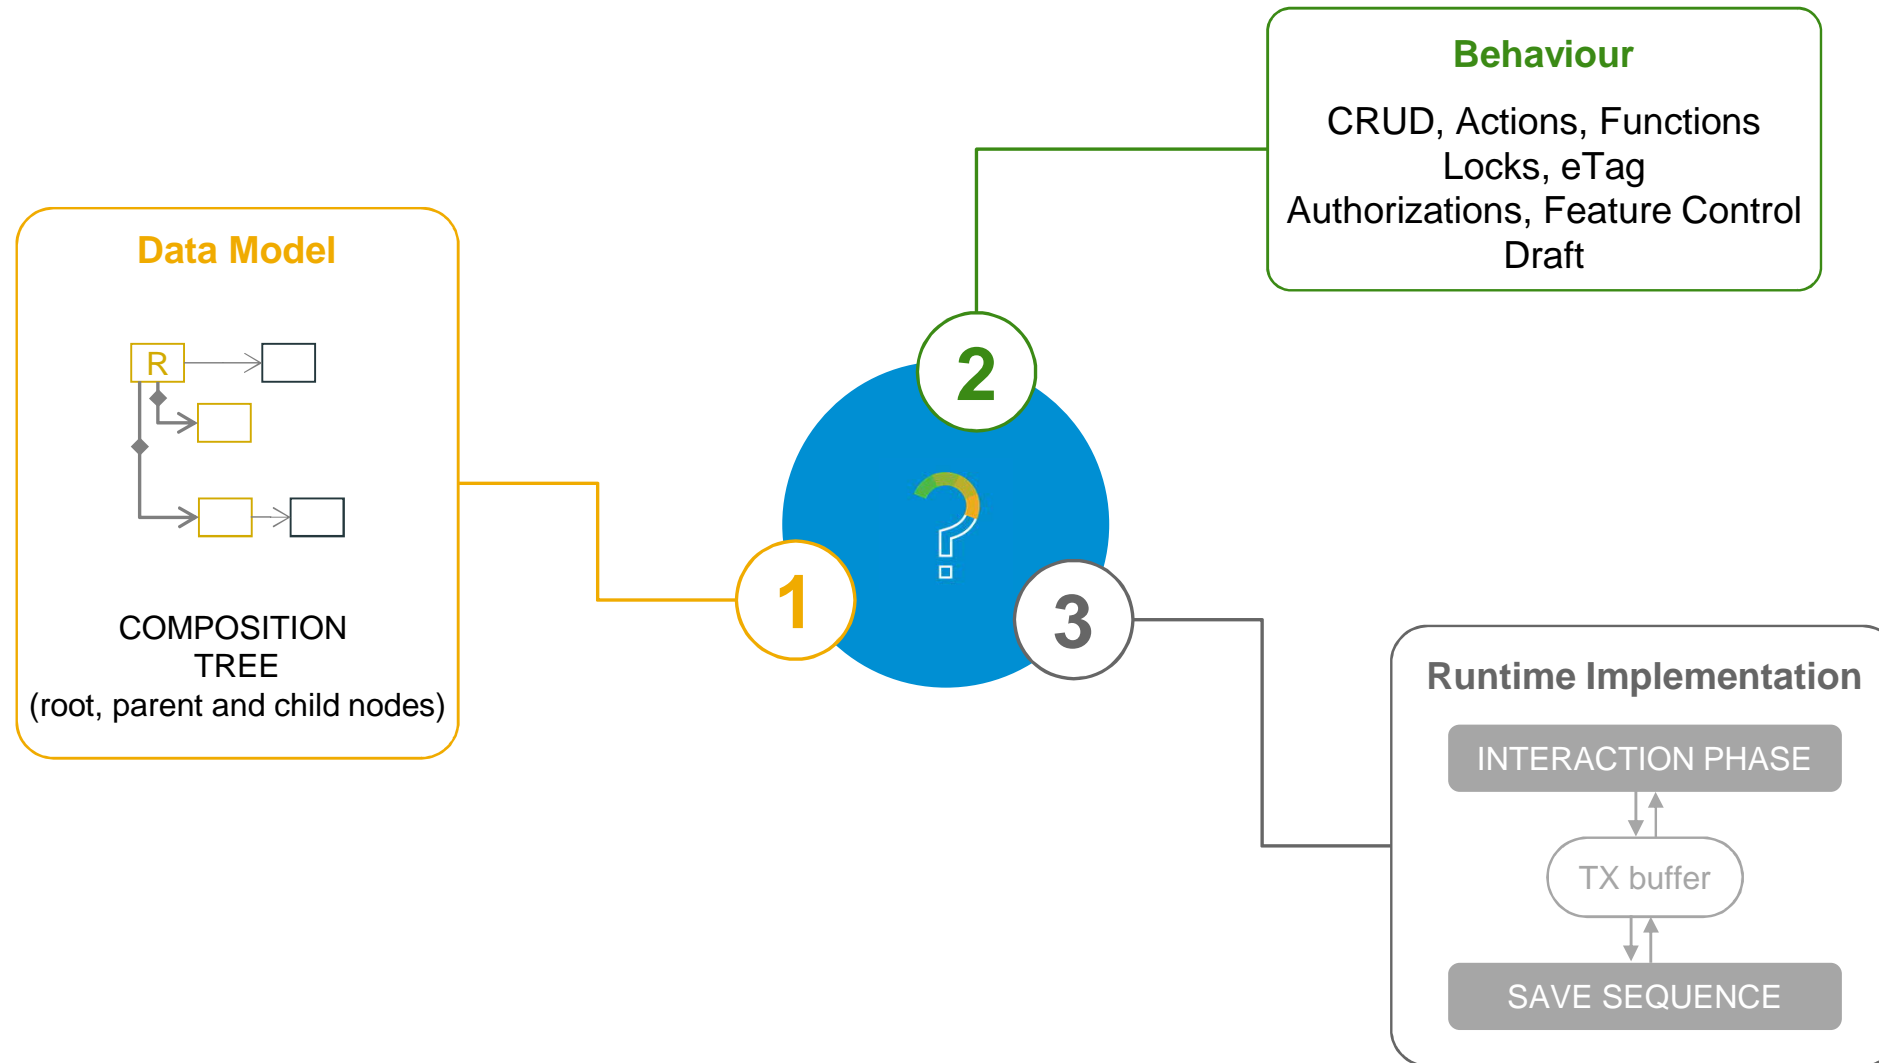

Business Objects (BOs)

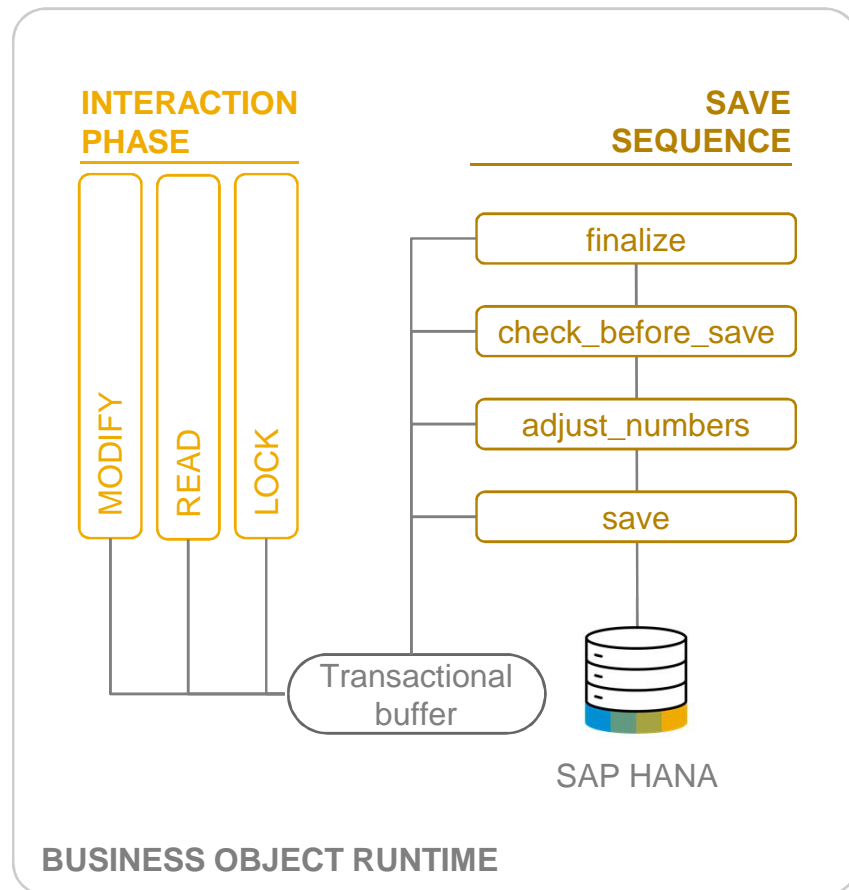

ABAP

ABAP RESTful Programming Model – What is a business object (BO)?

ABAP RESTful Programming Model – Runtime implementation types

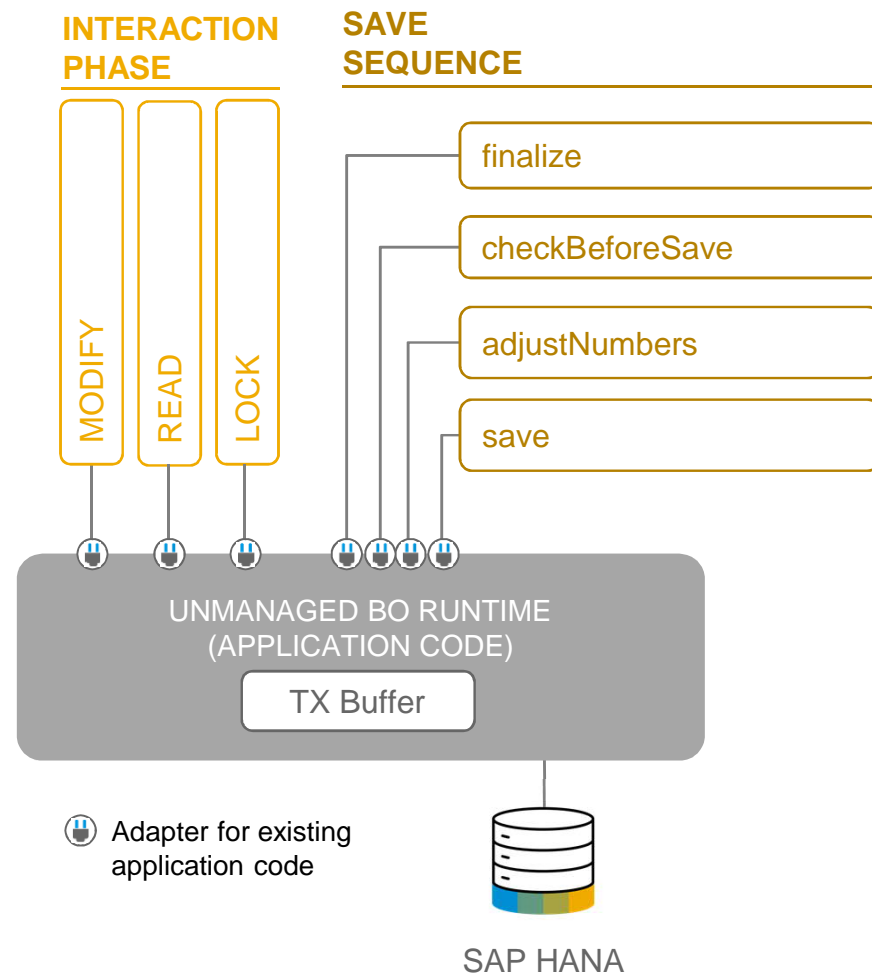

UNMANAGED

Brownfield development with application coding fully available:
Interaction phase + Transactional buffer + Save sequence

MANAGED*

Greenfield development with standard implementation
(opt. unmanaged appl. components: DB tables, lock/PFCG object, update task FM)

ABAP RESTful Programming Model – Unmanaged implementation

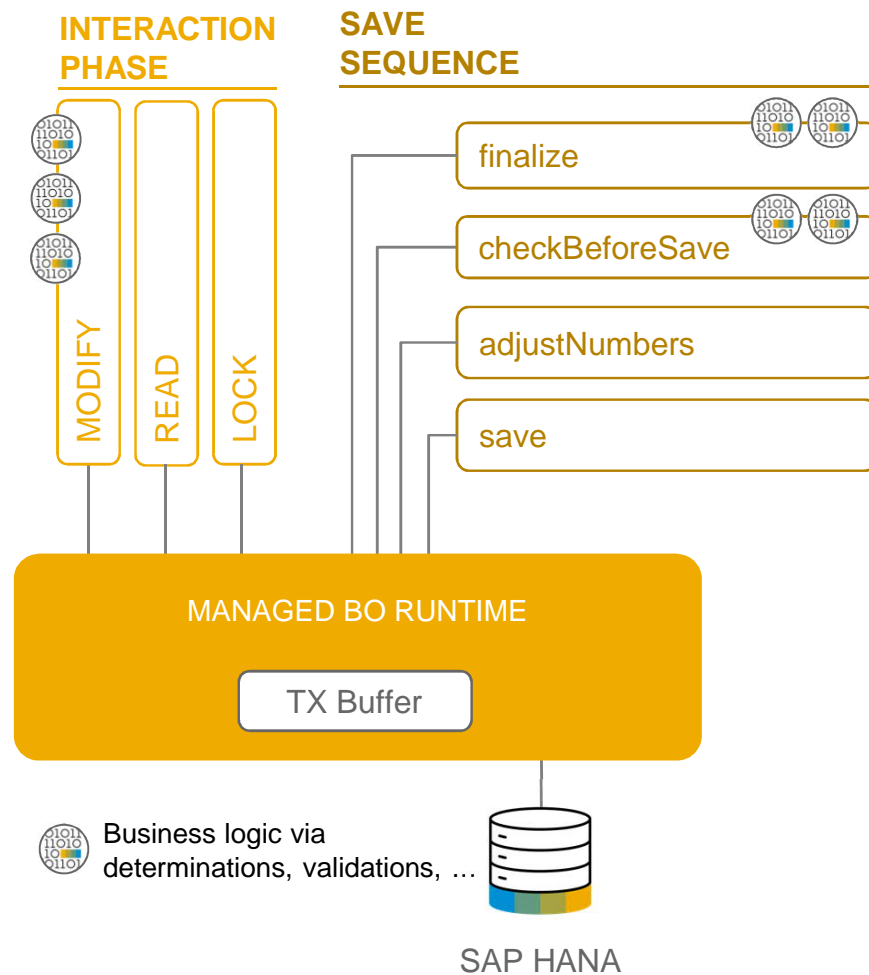

Application coding

- Already available
- For interaction phase, transactional buffer and save sequence
- Decoupled from UI technology

Examples

- Sales Order, Purchase Order

ABAP RESTful Programming Model – Managed implementation*

Application coding

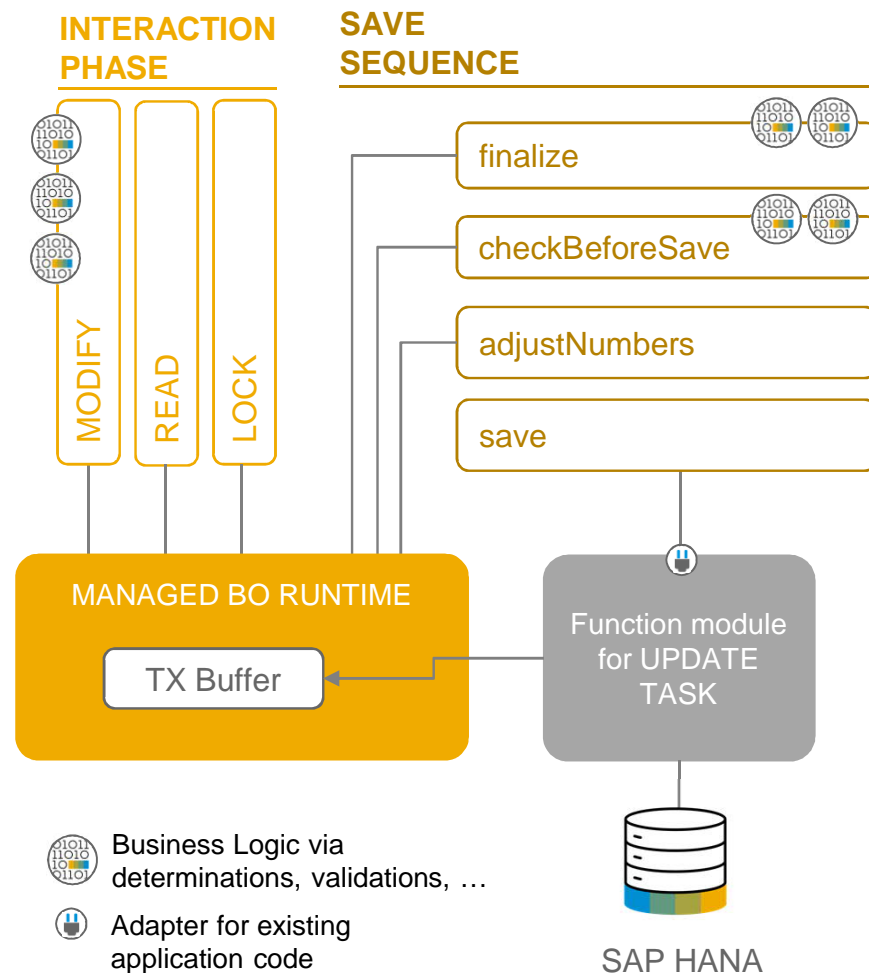

- Not yet available or fine granular reusable code available
- Technical implementation tasks taken over by BO infrastructure
- Developer focus on business logic, implemented via code exits: determinations, validation, actions,...

Examples

- New applications in SAP Cloud Platform ABAP Environment

* Currently only available in SAP Cloud Platform ABAP Environment

ABAP RESTful Programming Model – Managed impl. with unmanaged appl. Components*

Application coding

- “update-task function module” available
- Coding for interaction phase not available (e.g. highly coupled in older UI technology: DYNP - PBO / PAI)
- Technical implementation aspects to be taken over by BO infrastructure

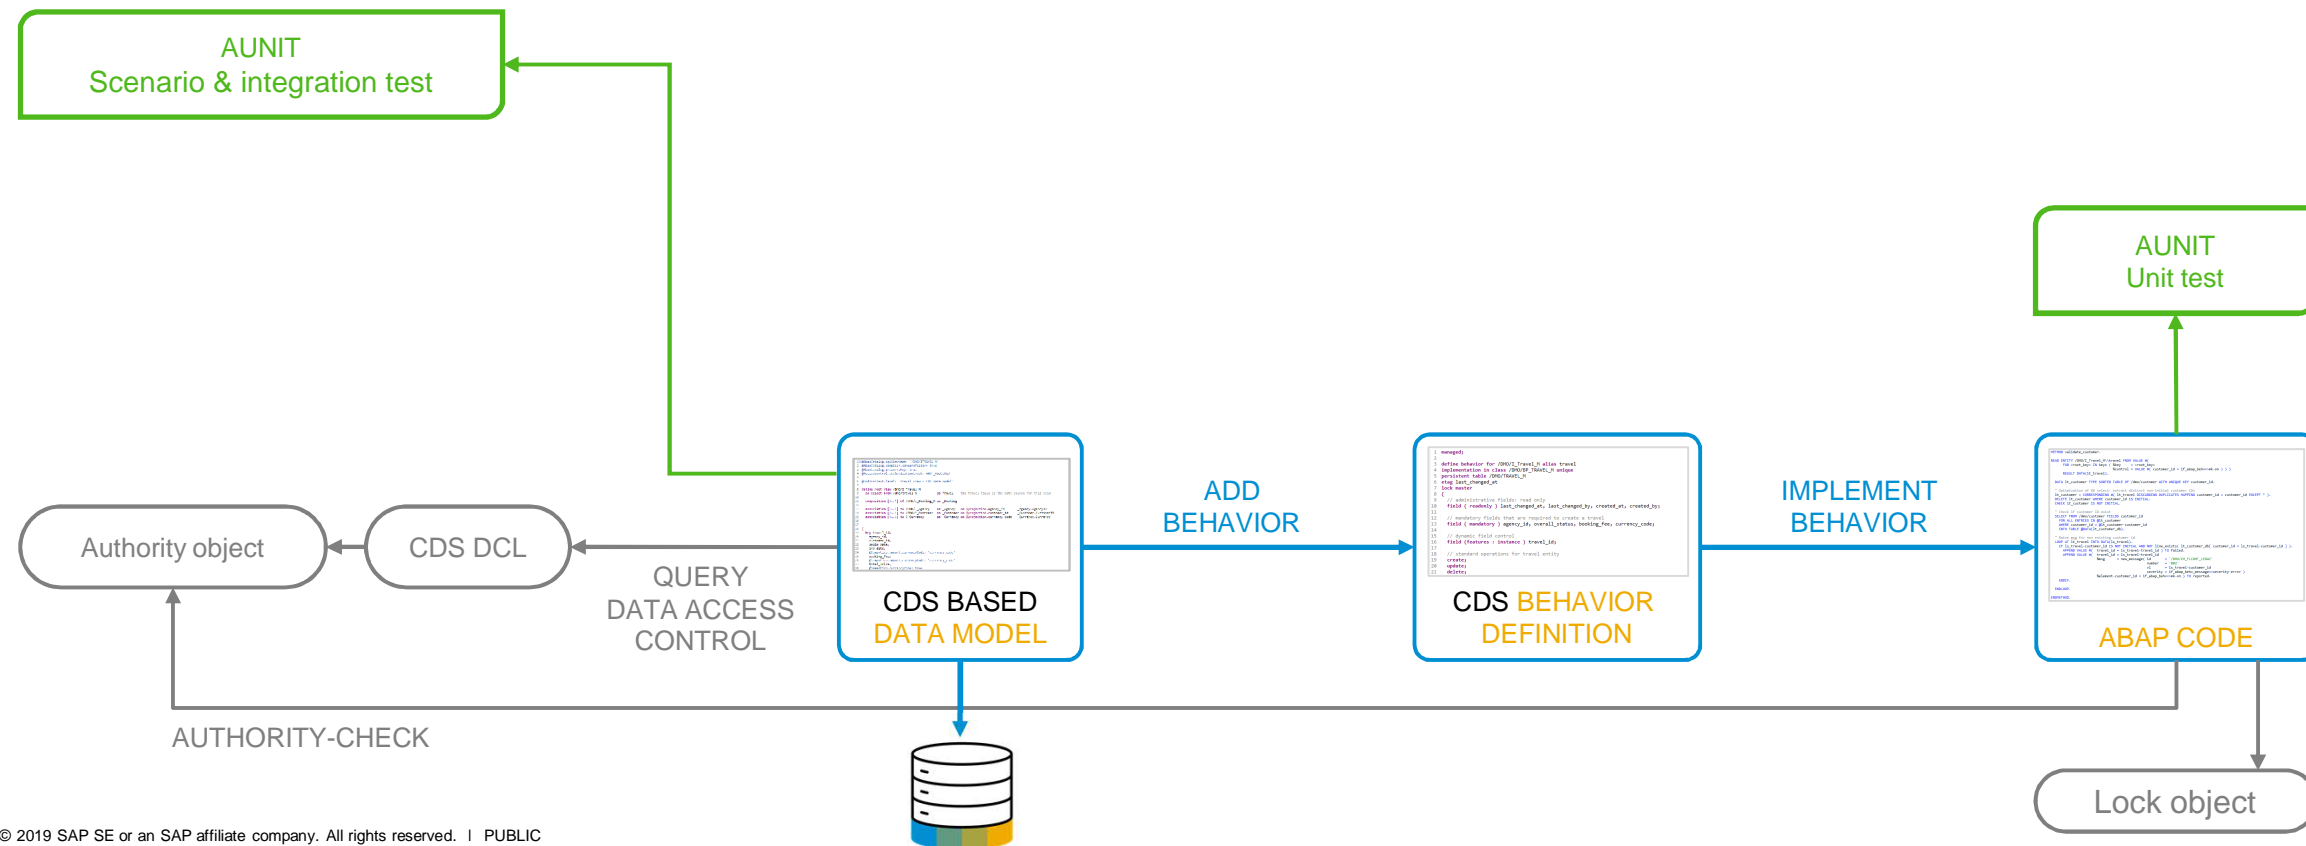

Examples

- Business Partner, Product

Optional unmanaged application components

- Update task FM: *unmanaged save*
- Own lock object: *unmanaged lock*
- Mapping between old and new world (e.g. DB tables): type mapping
- Old PFCG Object: *authorization master*

ABAP RESTful Programming Model – Development flow

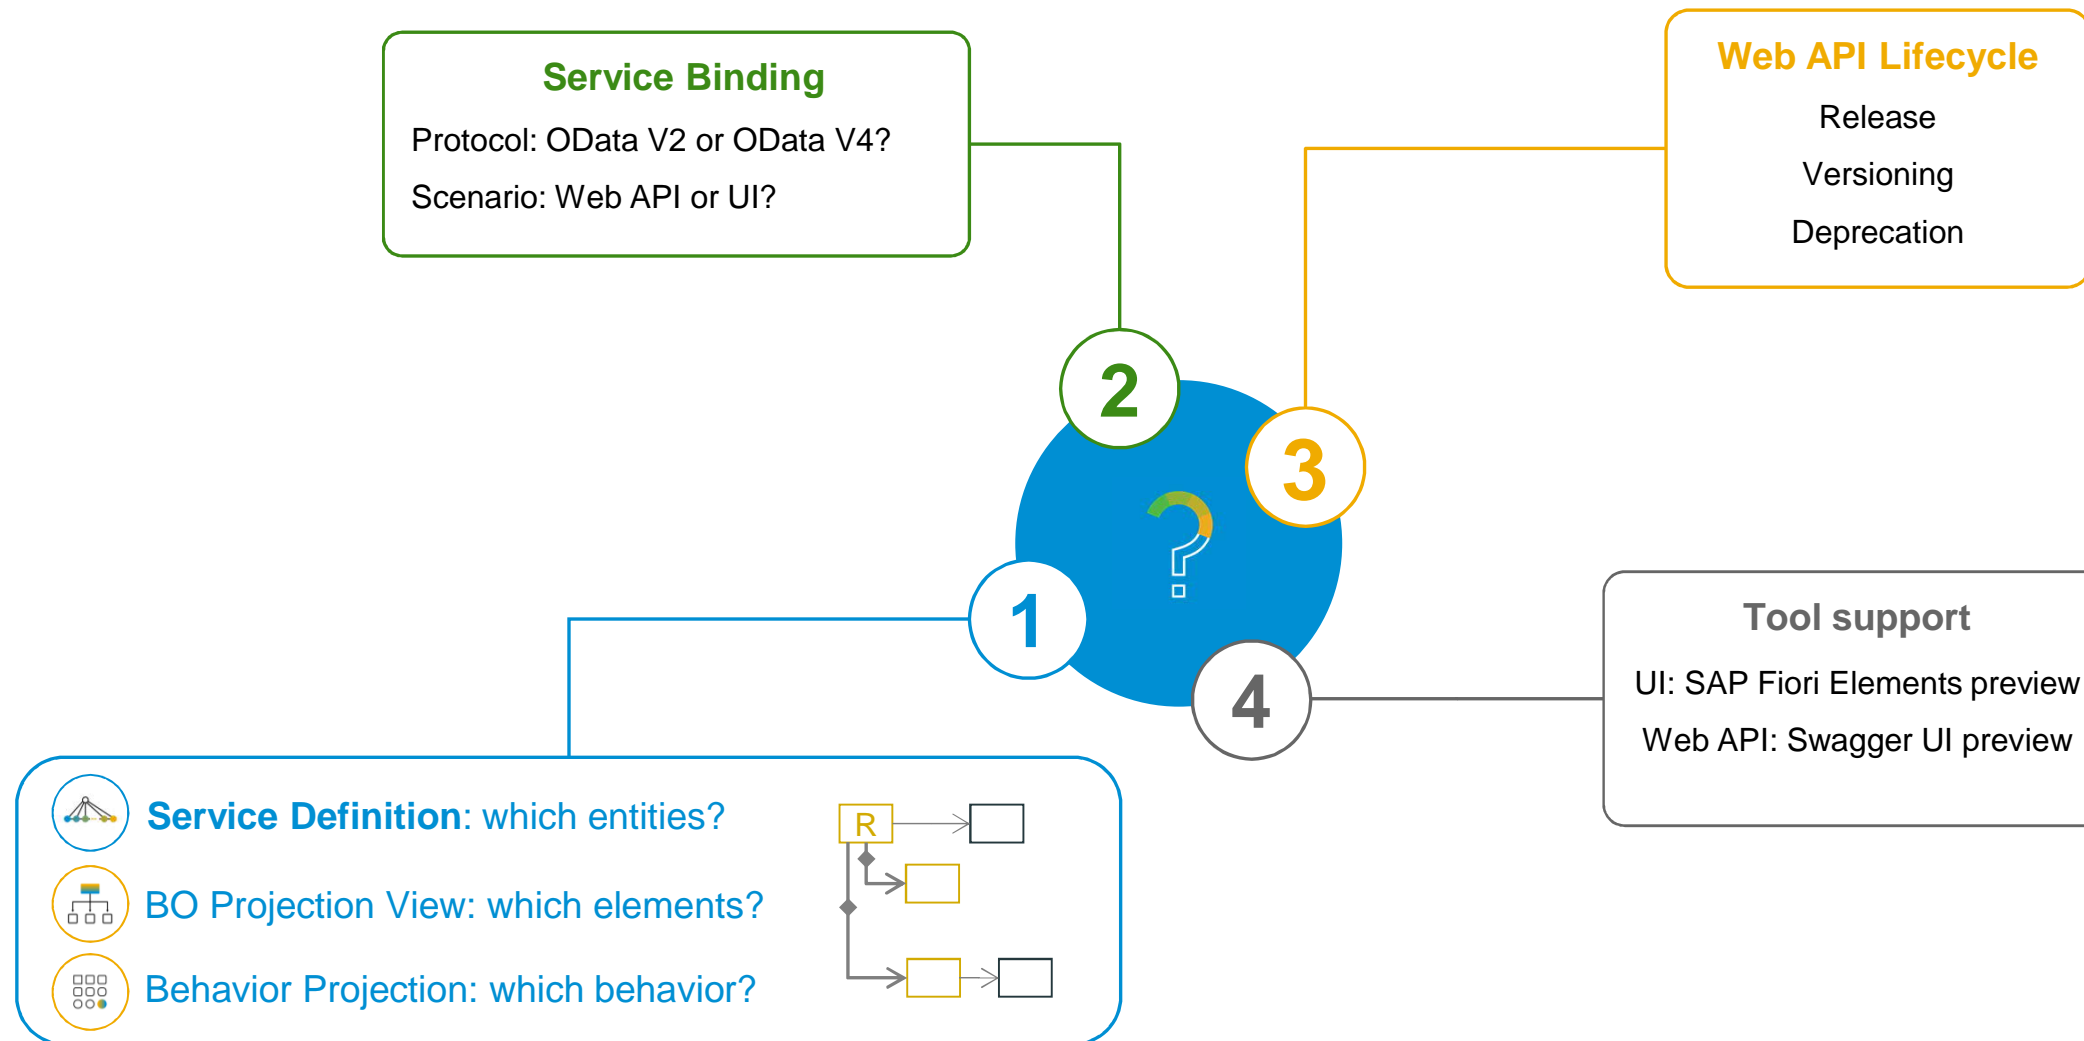

Business Services

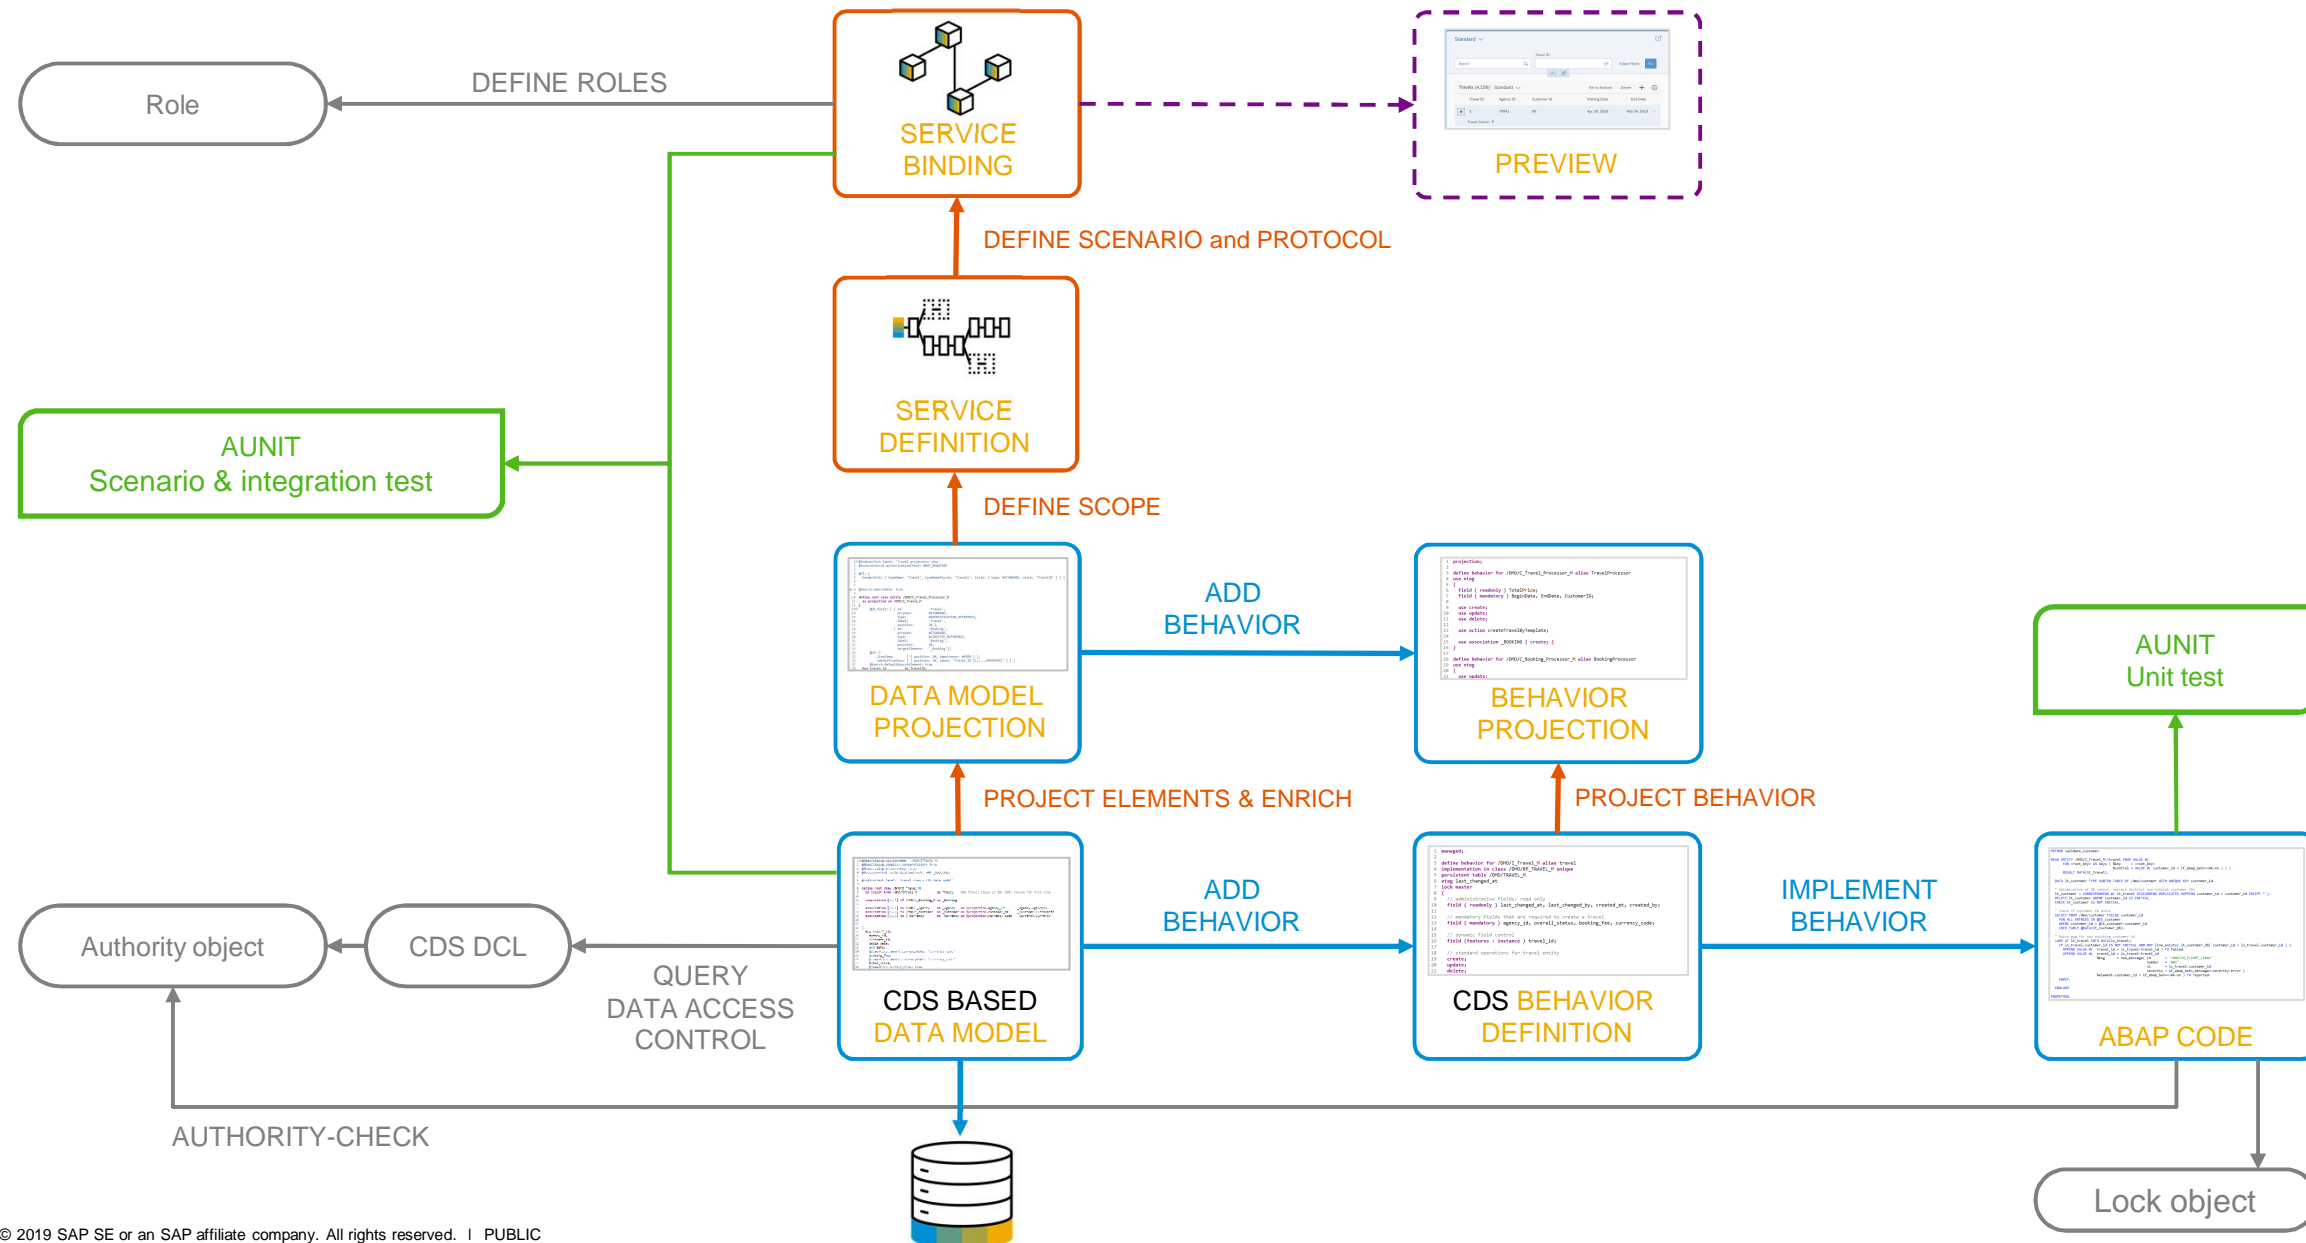

ABAP

ABAP RESTful Programming Model – What is a business service?

ABAP RESTful Programming Model – Development flow

Modern ABAP development in Eclipse

ABAP DEVELOPMENT TOOLS (ADT)

MODERN DEVELOPMENT TOOLSET

Fully eclipse-based
Syntax check, Code completion
Syntax highlighting, Pretty printing
Navigation, Search, Quick Fixes

QUALITY ASSURANCE

Static code checks (CVA, ATC) with
remote and local scenarios
Unit testing incl. isolation frameworks
Test seams and injections

SUPPORTABILITY

Debugging, profiling
Static and dynamic logging
Runtime monitoring and analysis

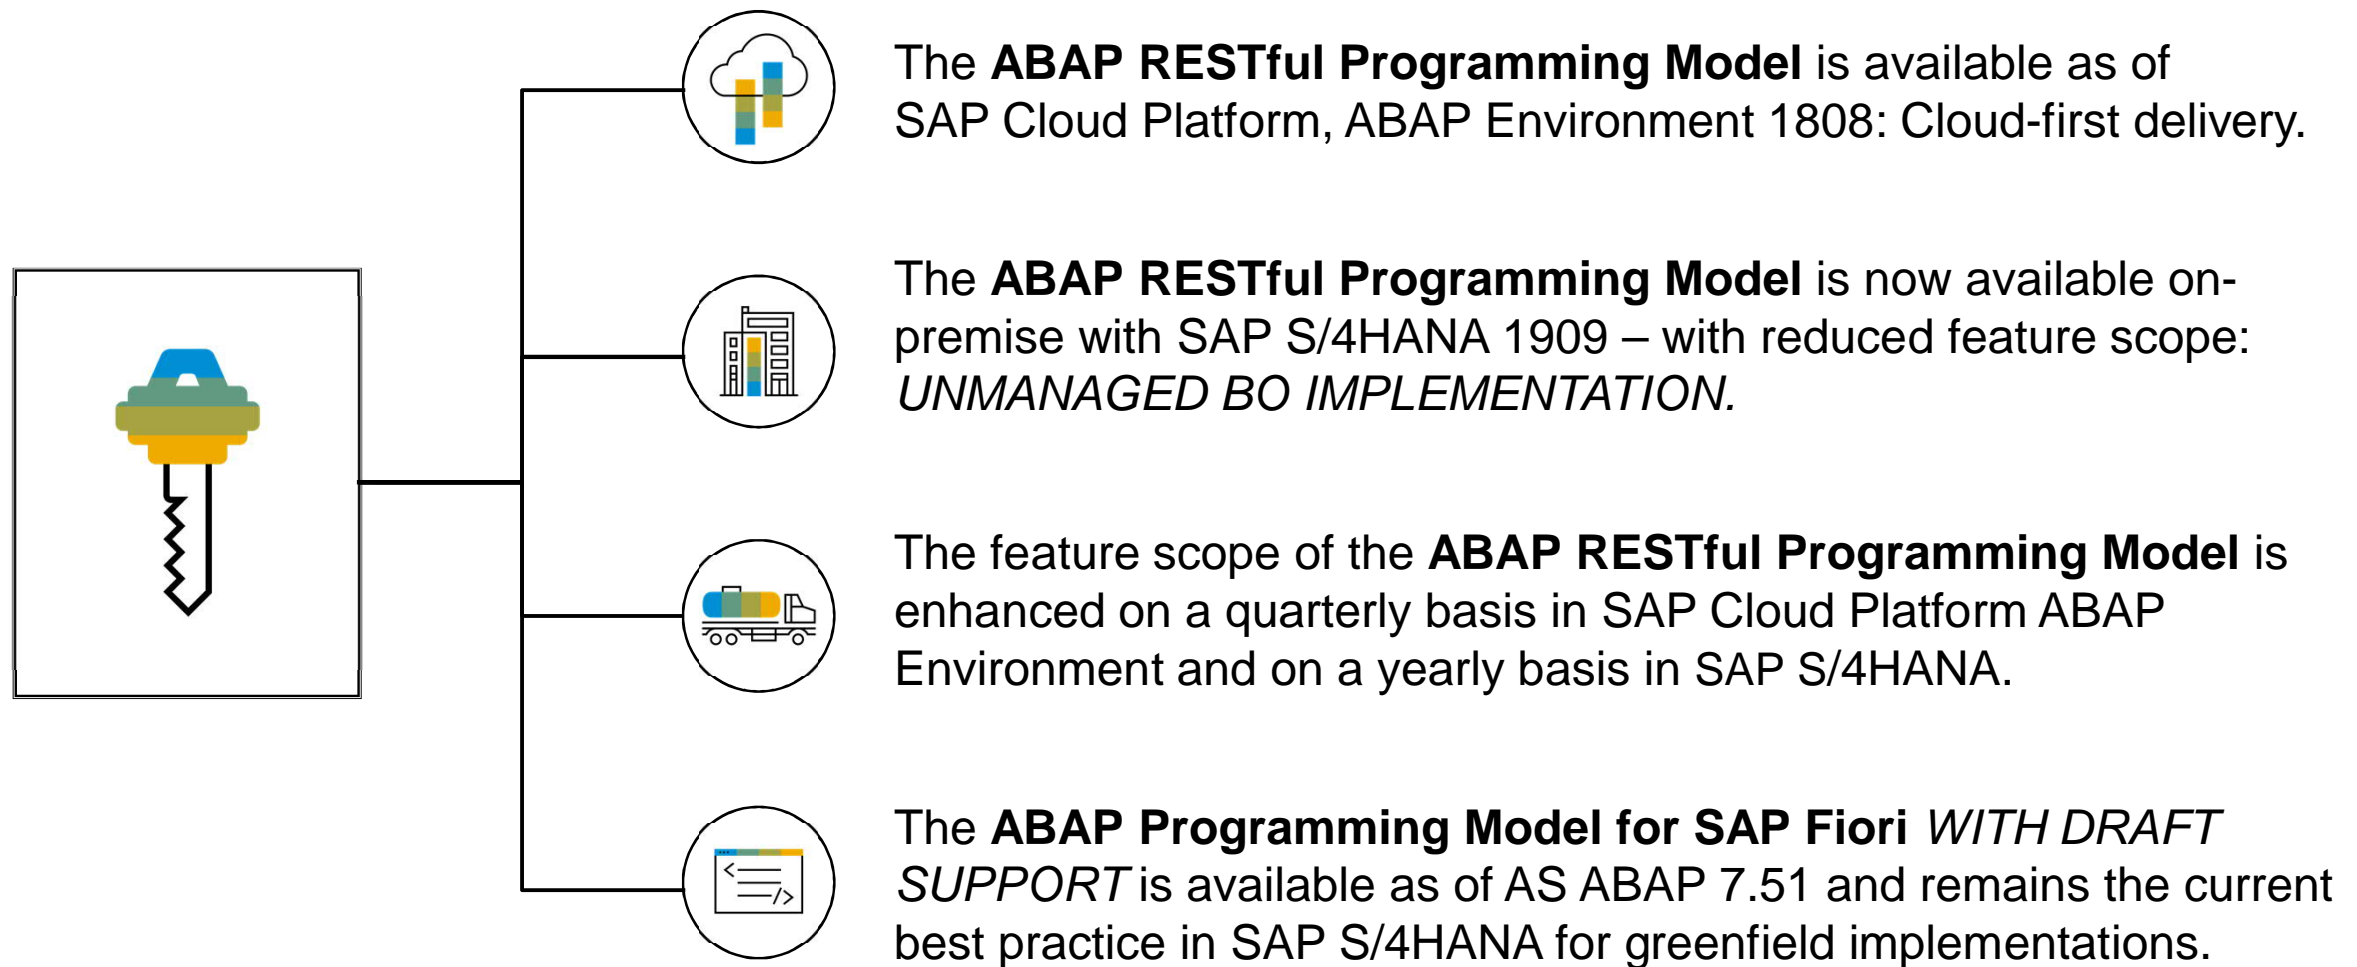

```
1 @AbapCatalog.sqlViewName: '/DMO/I_TRAVEL_M'
2 @AbapCatalog.compiler.compareFilter: true
3 @AbapCatalog.preserveKey: true
4 @AccessControl.authorizationCheck: #NOT_REQUIRED
5
6 @EndUserText.label: 'Travel view - CDS data model'
7
8 define root view /DMO/I_Travel_M
9   as select from /dmo/travel_m          as Travel -- the travel table is the data source for this view
10
11   composition [0..*] of /DMO/I_Booking_M as _Booking
12
13   association [0..1] to /DMO/I_Agency    as _Agency on $projection.agency_id = _Agency.AgencyID
14   association [0..1] to /DMO/I_Customer as _Customer on $projection.customer_id = _Customer.CustomerID
15   association [0..1] to I_Currency      as _Currency on $projection.currency_code = _Currency.Currency
16
17 {
18   key travel_id,
19   agency_id,
20   customer_id,
21   begin_date,
22   end_date,
23   @Semantics.amount.currencyCode: 'currency_code'
24   booking_fee,
25   @Semantics.amount.currencyCode: 'currency_code'
26   total_price,
27   @Semantics.currencyCode: true
28   currency_code,
29   overall_status,
30   description,
31   @Semantics.user.createdBy: true
32   created_by,
33   @Semantics.systemDateTime.createdAt: true
34   created_at,
35   @Semantics.user.lastChangedBy: true
36   last_changed_by,
37   @Semantics.systemDateTime.lastChangedAt: true
38   last_changed_at, -- used as etag field
39
40   /* Associations */
41   _Booking,
42   _Agency,
43   _Customer,
44   _Currency
45 }
46 }
```

Summary and Outlook

ABAP

Summary – Key takeaways

Outlook – Next steps planned for SAP Cloud Platform ABAP Environment

Business objects

Enhanced managed scenario: unmanaged appl. components, draft handling, managed early numbering, late numbering

Business Services

Service binding for OData V4 Web APIs

Web API consumption

Support for OData V4, REST
Actions & functions

Cross topics

Extensibility
Supportability
Documentation

Outlook – Next steps planned for SAP S/4HANA

Business objects

Managed scenario with CRUD based on determinations, validations, actions and functions, eTag, locks, feature control, authorization, draft
Migration of existing CDS-BOPF based BOs

Business Services

Service binding for OData V4 WebAPIs

Web API consumption

Support for OData V4, REST
Actions & functions

Cross topics

Extensibility
Supportability
Documentation
